The Medi-Cal Funded Deliveries report provides summary data on the number and type of Medi-Cal funded deliveries occurring in hospitals. This year, for the first time, the report is based on information developed by linking hospital discharge records with Medi-Cal eligibility information.

APPENDIX A: AID CODE CATEGORIZATION..... 117

PART ONE: ISSUES IN DELIVERY REPORTING

The Medi-Cal Funded Deliveries report has been published annually since 1978. This report provides statewide as well as county-level number of deliveries by age, type of delivery, type of facility and the amount of Medi-Cal expenditures. The report format has changed very little over time and the information source, the Pregnancy Monitoring System (PMS), an extract from the Medi-Cal paid claims files, has been only minimally updated despite significant changes in the Medi-Cal program over the past two decades.

The change with the greatest impact on delivery reporting is undoubtedly the movement of Medi-Cal eligibles into managed care systems, and the consequential non-reporting of encounters within the paid claims file. To address this missing segment of delivery reporting, we have turned to a different data source, the Patient Discharge Data (PDD) system reporting all inpatient hospitalizations within California, which is maintained by the Office of Statewide Health Planning and Development (OSHPD). Sponsored partially by a grant funded by the Kaiser Family Foundation, the PDD was linked to Medi-Cal eligibility information for the years 1994 through 1999. Discharges for calendar year 2000 were also linked when the data became available.

A review of deliveries within the linked PDD/Medi-Cal data set revealed greater numbers of deliveries than historically known from the PMS extract. The PMS selection criteria were reviewed and comparisons were made between deliveries selected from the two separate data sources. Many more deliveries are found in the linked PDD files, even after adding estimated managed care deliveries to the fee-for-service deliveries reported in the PMS.

We now know that using the PMS to report deliveries has resulted in an undercount since the development of the program. The loss of encounter data as beneficiaries moved into managed care has exacerbated the problem of counting deliveries using the PMS as our only data source. In addition to the undercount of numbers of deliveries, the numbers of deliveries performed by Cesarean Section are understated. In determining whether a delivery is performed by Cesarean Section, the PMS looks for a matching claim from the physician. During 1999, the percent of deliveries with a matching physician claim was 74%.

We now have access to the PDD/MEDS linked data sets for years 1994 through 2000. Utilizing this resource allows us to report revised delivery numbers for fee-for-service Medi-Cal as well as the first usable encounter information for beneficiaries in managed care. The linked file provides overall numbers of deliveries as well as an increased level of medical information. The most significant missing piece of information would be the Medi-Cal paid amount, which could be retrieved from the PMS system as an average per delivery.

Since neither of the two data sources (PMS and PDD/MEDS) can provide all the information necessary for delivery reporting, this report uses the PMS for expenditures and the PDD/MEDS for diagnostic information as well as more accurate managed care estimates. Tables are presented for the entire time series, and information from this report is not comparable with previously reported delivery numbers based solely on the Pregnancy Monitoring System.

PART TWO: NUMBER OF DELIVERIES – SEVEN-YEAR TIME SERIES

Medi-Cal as Percent of Total California Births

The California general fertility rate, the number of births per 1,000 women ages 15 through 44, has declined over the years 1994 through 2000 from a high of 78.1 in 1994. The rate dropped 9.7% to 70.5 in 1999 and then increased slightly in calendar year 2000 to 71.9.

Medi-Cal funded births also decreased over this seven-year time span, although in a different pattern. For this segment of the population, births decreased each year in the first five years of the study period and then began climbing for the years 1999 and 2000. The actual number of births to Medi-Cal beneficiaries in 1994 was 269,770, dropping 16.8% to 224,405 in 2000.

Births to Medi-Cal beneficiaries ranged between 42% and 48% of total births in California hospitals during the years 1994 through 2000. Although at the beginning of this seven-year time span Medi-Cal births represented nearly 48% of the statewide total, by calendar year 2000 the percentage had dropped to 42%.

2000	529,766	224,405	42.36%	71.9

Number of Deliveries by Type, and Average Length of Stay

Uncomplicated vaginal births represented over 69% of all births in 1994 and dropped slightly to 66.31% in calendar year 2000. A corresponding increase is seen in uncomplicated Cesarean deliveries, from 14.77% of deliveries in 1994 to 17.87 % in 2000.

Variation in the average length of stay is related to type of delivery. The average number of days stay per delivery increased steadily but in very small increments during the seven years of the report period. The overall average increased by one-half day from 1.9 days in 1994 to 2.4 days in 2000. Uncomplicated vaginal births resulted in the shortest average stays, from 1.4 days to 1.9 days, and uncomplicated Cesarean births ranged from 3.0 days in 1995 and 1996 to 3.4 days in 2000.

Number of Deliveries by Age

Across all seven years of the report period, women ages 20 through 24 delivered approximately 33% of the babies, followed by women ages 25 through 29, who were responsible for about 25% of the deliveries each year. Older teens, ages 18 and 19, consistently represented 12% of the mothers. However, younger teens, ages 15 through 17, experienced a slight reduction from a high of 7.08% in 1995 to only 5.80% in calendar year 2000. The youngest mothers, under age 15, made up less than one-half of one percent of all deliveries in this time period. Births to women in this age group decreased by 48% from 1,290 in 1994 to 675 deliveries in calendar year 2000.

Number of Deliveries by Ethnicity

About two-thirds of Medi-Cal funded deliveries (66%) in calendar year 2000 were to Hispanic women. The second largest group was white women (16%), followed at 9% by black women and 6% for Asian women. Hispanic women were the predominant ethnic group throughout the seven years of the report, climbing from 60% of Medi-Cal deliveries in 1994 to a high of 66% in year 2000. The proportion of white women declined the most over the seven-year period – from 21% in 1994 to 16% in 2000. The percent of births to black women and Asian women also dropped during the report period, but by smaller amounts. Black women represented 10% of births in 1994, dropping to 9% in 2000. The proportion of Asian women declined in a similar manner, from a high of 7% to a low of 6%.

Number of Deliveries by Aid Group

Over 80% of the Medi-Cal-funded deliveries fell into only two aid categories. The greatest number of deliveries was to persons in the Families aid group, followed by the Undocumented category. At the beginning of the seven-year report period, the Families aid category accounted for 50% of deliveries, while Undocumented followed at 33%. By the end of the time period, the Families category dropped to 41% of total and the Undocumented group rose to 39% of the deliveries. The Percent Poverty category represented 12% of deliveries in calendar year 2000; all remaining categories were very small. See Appendix A for a list of aid codes by category.

*Minor Consent aid codes were implemented in September 1997. Prior to 1997 minor consent services were provided as restricted services under various aid codes. These early Minor Consent services cannot be independently identified in the database used to build this report.

Number of Deliveries by Fee-for-Service versus Managed Care Plan

Since 1994 the Medi-Cal program has moved substantial numbers of eligibles into managed care systems; however, most Medi-Cal funded deliveries are provided via a Fee-For-Service arrangement with Medi-Cal providers. This continued concentration in FFS is largely due to women in aid categories such as "Undocumented" and other categories who are eligible only for pregnancy-related or emergency services.

For a history of managed care and detailed information about the types of programs listed in the table below, see the "Managed Care Annual Statistical Report" prepared by Jim Klein, available on our web site: www.dhs.ca.gov//MCSS.

PART THREE: DEMOGRAPHICS AND TYPE OF DELIVERY, BY YEAR OF DISCHARGE

This section provides more-detailed information by year of delivery for each of the years from 1994 through 2000.

For each of the seven years, aid category is reported by ethnicity, by type of delivery and by age of the mother. Age is also reported annually by type of delivery and by ethnicity. In addition to the cross-tabulations for type of delivery stated above, annual tables are included for ethnicity by type of delivery.
